

GIANG LE HUYNH

Full-Stack AI Engineer

✉ lhgiang040504@gmail.com ☎ 0812 206 773 in lhgiang040504 🌐 lhgiang040504

Summary

Full-stack AI / LLM Systems Engineer who delivers production AI products end-to-end - from client scoping and architecture to full-stack development, deployment, and operations. Built agentic assistants, RAG, Japanese voice-AI, and computer-vision systems for B2B clients across Singapore and Japan, with a focus on reliability, latency, and cost.

Experience

AI Developer Intern – FunAI (Functional AI Partners)

May 2026 – Present

- Contribute to end-to-end delivery of production **“Digital Staff” AI agents** for enterprise B2B clients in Singapore and Japan - from client scoping to deployment and operations
- Built a LangGraph and FastAPI course-generation platform that automates image creation and module-summary videos using MinIO and Creatomate/FFmpeg
- Automated document intake, classification, and filing across **16+ n8n workflows**; built a natural-language retrieval assistant using parameterized SQL
- Built a multi-agent **Japanese voice-AI** customer-service system (ElevenLabs, Firebase, Twilio), including keigo prompts, KYC verification, and a **68-case** regression suite
- Delivered a distributed face-detection & clustering pipeline (PyTorch, YOLO, InsightFace, HDBSCAN) with GPU orchestration for a **5 GB+** full-stack upload platform

AI Researcher – InsecLab (University Lab)

Feb 2025 – May 2026

- Published **2 IEEE papers** (1 first-author) on LLM- and multimodal-based smart contract vulnerability detection
- Developed a six-stage LLM prompt pipeline and hybrid LLM-embedding / heterogeneous-graph workflows for automated vulnerability analysis
- Led a multimodal detection pipeline achieving **0.823 F1** and **96.73% accuracy**; benchmarked five fusion strategies and ran ablation studies

AI Research Collaboration – Pi Labs AI (India Company)

Sep 2025 – Dec 2025

- Defined the dataset schema and evaluation plan for telecom anomaly detection on CDR/IPDR data in an industry collaboration
- Built synthetic-data generation and anomaly-simulation pipelines; explored multimodal CDR + voice/text signals for fraud detection

Publications

Prompt-Based Smart Contract Analysis [🔗](#)

Co-Author, IEEE MAPR 2025 Conference

Multimodal Approach for Smart Contract Security [🔗](#)

First Author, IEEE ISCIT 2025 Conference

Education

B.S. University of Information Technology (UIT), VNU-HCM

2022 – 2026

Major: Computer Science

Specialization: Artificial Intelligence and Information Security

Skills

Production AI Systems: LangGraph, Multi-Agent Systems, RAG, LLM Evaluation, Voice AI, Prompt Engineering

Backend & AI Platform: Python, FastAPI, n8n, SQL, PostgreSQL/pgvector, SSE Streaming, ETL Pipelines

Deployment & Operations: Docker, CI/CD, Monitoring & Observability, Cost & Latency Optimization, Firebase, MinIO

Full-Stack Delivery: TypeScript, Next.js/React, Fastify, Supabase, Cloudflare R2

ML & Computer Vision: PyTorch, Transformers, Multimodal Learning, YOLO, InsightFace, HDBSCAN

English: Upper-Intermediate (B2)
